

# Welcome to the Year 3 Page for Summer Term 2019

Can you believe that the summer term is here already?

For the first half term we will be exploring a unit of work called **Active Planet** where we will find out about the different layers of the earth and make a playdoh model.

We will look at how Plate tectonics affect the landscape of the earth. We will learn what happens within the earth to cause an earthquake and how to keep safe in an earthquake.

Using our map skills, we will locate volcanoes and earthquakes on a world map. We will investigate the different ways a volcano can form and debate the positive and negative effects of volcanoes.

During the second half of the term we will be covering a unit of work called **Scavengers and Settlers** which is our final topic in Year 3! Our learning will be in the subjects of History, Art, Technology and visiting Flag Fen.

We will be researching and finding out about the people and cultures from the Stone Age, Bronze Age and Iron Age.

We will also be considering the needs of people during these times in order to design and make products.
